Sample GPB Chemistry Questions and Well-Structured Answers

Question 1: Describe the structure of an atom and explain its significance in chemistry.

Sample Answer: An atom consists of a nucleus containing protons and neutrons, surrounded by electrons that orbit in specific energy levels or shells. The protons carry a positive charge, neutrons are neutral, and electrons are negatively charged. The structure of an atom is significant because it determines how atoms interact, bond, and form compounds. For example, the number of electrons in the outer shell influences an element's reactivity. Understanding atomic structure helps chemists predict how different elements will behave in chemical reactions and guides the development of new materials.

Question 2: Explain the difference between ionic and covalent bonds with examples.

Sample Answer: Ionic bonds form when electrons are transferred from a metal to a non-metal, resulting in oppositely charged ions that attract each other. For example, sodium chloride (NaCl) forms through the transfer of electrons from sodium to chlorine. Covalent bonds involve the sharing of electrons between non-metal atoms to achieve stability, as seen in water (H?O), where oxygen shares electrons with hydrogen atoms. The main difference is that ionic bonds involve electrostatic attraction between ions, while covalent bonds involve shared electron pairs. Ionic compounds tend to have high melting points and conduct electricity when molten or dissolved, whereas covalent compounds usually have lower melting points and do not conduct electricity in solution.

Question 3: Write and balance a chemical equation for the combustion of methane.

Sample Answer: The unbalanced equation is CH? + O? ? CO? + H?O. To balance it:

- Carbon: 1 atom on both sides ? balanced.
- Hydrogen: 4 atoms in CH?, so we need 4 H in water: 2 H?O.
- Oxygen: On the right, 2 from CO? and 2 from 2 H?O, totaling 4 oxygen atoms. On the left, O? molecules provide 2 oxygen atoms each, so we need 2 O? molecules.

The balanced equation is:

CH? + 2 O? ? CO? + 2 H?O
